

# Laravel Jetstream

Laravel Jetstream is a beautifully designed application starter kit for Laravel and provides the perfect starting point for your next Laravel application. Jetstream provides the implementation for your application's login, registration, email verification, two-factor authentication, session management, API via [Laravel Sanctum](#), and optional team management features.

```
composer require laravel/jetstream
```

## Jetstream with Livewire

```
php artisan jetstream:install livewire
```

```
php artisan jetstream:install livewire --teams
```

## Publish Livewire Blade Component

```
php artisan vendor:publish --tag=jetstream-views
```

```
resources/views/vendor/jetstream/components/application-  
logo.blade.php
```

```
resources/views/vendor/jetstream/components/authentication-card-  
logo.blade.php
```

```
resources/views/vendor/jetstream/components/application-  
mark.blade.php
```

## Jetstream with Inertia

```
php artisan jetstream:install inertia
```

```
php artisan jetstream:install inertia --teams
```

```
php artisan jetstream:install inertia --ssr
```

## Customizing Component

```
resources/js/Components/AuthenticationCardLogo.vue
```

```
resources/js/Components/ApplicationLogo.vue
```

```
resources/js/Components/ApplicationMark.vue
```

```
npm run build
```

## Finalizing The Installation

```
npm install
```

```
npm run build
```

```
php artisan migrate
```
