# Laravel Breeze

Breeze provides a minimal and simple starting point for building a Laravel application with authentication. Styled with Tailwind, Breeze publishes authentication controllers and views to your application that can be easily customized based on your own application's needs.

Laravel Breeze is powered by Blade and Tailwind. If you're looking for a more robust Laravel starter kit that includes two factor authentication, Livewire / Inertia support, and more, check out Laravel Jetstream.

Laravel Breeze Documentation
Laravel Breeze Github

Vite

```
composer require laravel/breeze --dev
```

Mix

For Laravel 8

```
composer require laravel/breeze:1.9.4
```

```
php artisan breeze:install
// default use blade
```

```
php artisan breeze:install vue
php artisan breeze:install react
// if want to insta with vue or react

php artisan breeze:install vue --ssr
php artisan breeze:install react --ssr
// if want to instal with vue or react use SSR (Server Side Rendering) and
SPA (Single Page App)

php artisan migrate

npm install

npm run dev
```
