# Laravel Breeze

Breeze provides a minimal and simple starting point for building a Laravel application with authentication. Styled with Tailwind, Breeze publishes authentication controllers and views to your application that can be easily customized based on your own application's needs.

Laravel Breeze is powered by Blade and Tailwind. If you're looking for a more robust Laravel starter kit that includes two factor authentication, Livewire / Inertia support, and more, check out Laravel Jetstream.

Laravel Breeze Documentation

Laravel Breeze Github

Install for Vite

```
composer require laravel/breeze --dev
```

Install for Mix

```
composer require laravel/breeze:1.9.4
```
